

Four independent causal gates, matched-controlled, pre-registered

γ attention

redirect a key's weight
→ TRANSPORT
(re-delivery explains it)

delivery ladder

is there a skill shortcut?
→ NO — fix is delivery
(27-byte binding)

synthesis

compose an ABSENT fact?
→ retrieval+elimination;
CoT = self-delivery

latent scratchpad

OPTIMIZE a latent state
→ answer-injection,
not composition

ONE THESIS (1B-3B, two families, cross-model)

the network DELIVERS, and composes only through an EXTERNAL buffer;
it does not latently COMPUTE — and a latent scratchpad cannot be optimized into existence
